

Paleozoic Salt Bearing Formations of the World

The original Russian edition of the monograph Paleozoic salt formations of the world was published by Nedra, Moscow, in 1974. The description of salt basins was given as of 1970-1971 and based on the literature available at that time. Additional evidence was presented in History of Paleozoic salt accumulation (Nauka, Novosibirsk 1978), with a brief account of new basins of Paleozoic salt accumulation. These two books complement each other and have one common list of references, the former providing the material which in the latter is the basis for the major trends in the history of evaporite sedimentation in the Paleozoic. History of Paleozoic salt accumulation was the first of the two books to be published in English (Springer, Berlin, Heidelberg, New York 1981). The present book is the first synthesis dealing with specific Paleozoic salt formations and some salt basins. However, since the first edition was published 10 years ago, new data since then allow more accurate and detailed description of composition, structure, and distribution patterns of salt deposits within Paleozoic evaporite basins. New basins have also been found in some regions of the Earth. The author has attempted to give more complete characterization of Paleozoic salt basins using the data available as of 1981.

M. A. Zharkov 1984. Paleozoic Salt Bearing Formations of the World.
